# Overseeding techniques

**Your fields, our passion**

# Successful grassland management

Good grassland management boosts the yield per hectare and improves quality. Overseeding is the key to success and earns you at least € 300,- per hectare! Vredo's overseeders are justifiably renowned worldwide in the agricultural sector and extremely popular with farmers, contractors, fruit growers and in the viticulture and equine sectors. These technically advanced all-rounders score high on quality, ease of use and efficiency.

## An eye for quality

- Robust construction using materials and paint of the highest quality; an investment for life!
- Suspended element follows soil contours perfectly and creates a uniform sowing depth.
- Accurately settable sowing depth (0-25 mm).
- Progressive coil spring double discs adapt perfectly to soil contours.
- Special cam wheels enable high-precision, custom sowing for finer or larger seed (e.g. clover and rye).

## Designed for ease of operation

- Maintenance-free elements.
- Easily registers how many hectares have been sown.
- User-friendly and quick calibration test for optimal control.
- Easy to access seed tray with a clear level indicator.
- Continuously adjustable pneumatic/mechanical seed dosing (3-190 kg per hectare).

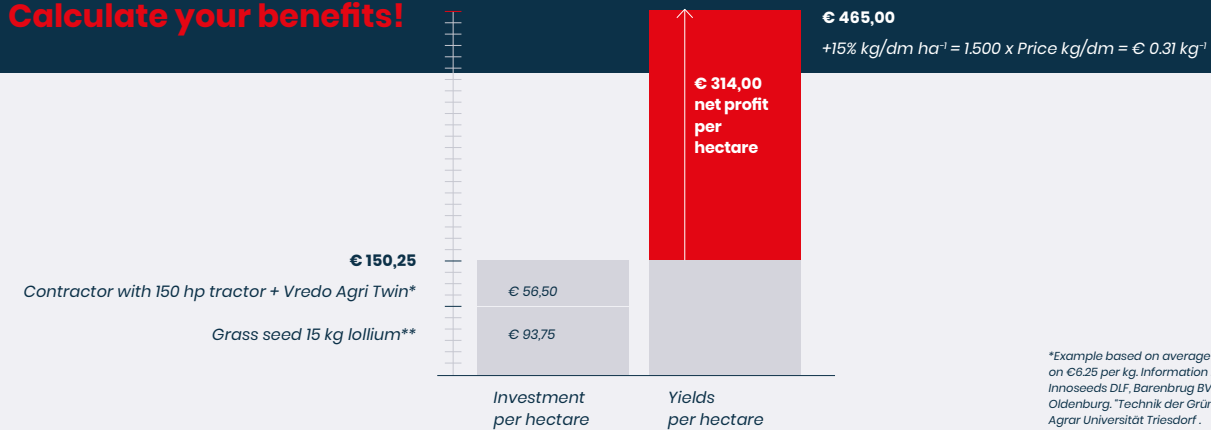

## Developed for efficiency

- Optimal seed placement thanks to an advanced double disc system that guarantees rapid germination and rooting of the grass seed.
- Optimal germination conditions as the seed is inserted in the fertile soil and then covered. (96% germination rate of the seed).
- Outstanding protection of seed against varying weather conditions and birds.
- Save up to 80% of valuable time and fuel in a single pass compared with grassland renovation by ploughing, cultivating, levelling, sowing and rolling. A capacity of 5 ha/h is combined with fast working speeds (10-12 km/h).
- The narrow, 7.5 cm row distance encourages the rapid development of a dense grass surface, with a lower weed pressure and better yields.

# A Vredo overseeder for every situation

Calculate your benefits!

## Agri

Mechanically driven, dosed seeder in two working widths of 2.47 metres and 2.85 metres. The unrivalled iconic Vredo overseeder.

## Agri Air

Pneumatic overseeder with hydraulic drive, in two working widths of 2.47 metres and 2.85 metres. Extremely suitable for hilly conditions.

## Agri Twin

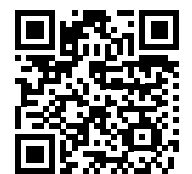

Pneumatic overseeder with hydraulic drive, in two working widths of 2.47 metres and 5.70 metres. Optimal for large scale use.

## Agri Compact

Compact seeder in four working widths of 0.97 metres, 1.35 metres, 1.80 metres and 2.17 metres. Ideal for narrow areas (e.g. grassland, fruit growing and viticulture).
