The gold standard in slurry injection

The key to the success of a better yield all starts with the best slurry application method. In terms of slurry injection technology, Vredo's innovative slurry injectors are unrivalled in the sector. In addition to the well-known V-disc technology, our reviewed product range features weight reduction, fewer wear-sensitive parts, easier maintenance and precision injection with the acknowledged and reliable Vredo quality. Discover more and be convinced!

Designed for ease of operation

- Optimal precision farming thanks to GPS technology and hydraulic section control valve.
- Steerable disc elements.
- Extremely accurate in following soil contours thanks to an innovative levelling system on the main frame.
- The progressive spring technology ensures the elements maintain the correct depth.
- Labyrinth seals on the bearings eliminates the need for lubrication and ensures a long service life.

Designed for quality

- Optimal precision injection thanks to an innovative section control system, which opens quickly and effortlessly connects with ISOBUS systems from other manufacturers.
- Easy, lower frequency maintenance.
- Innovative V-disc technology (single or double disc system): the perfect injector for every situation.
- Fewer moving parts and higher wear resistance.
- Light weight compared with similar machines.

Developed for efficiency

- Perfect slurry injection yields the best quality grass with higher nutritional values, so your animals need fewer concentrates.
- Lower emissions and less soil compaction.
- Slurry injected in sharp cuts in the soil reduces damage caused by crop burn, encourages faster regrowth and new yields.
- Up to 35% (cattle) and 41% (pigs) higher utilisation of the available nitrogen.
- Unique length and width distribution (best in the market!) ensures clean, accurate work, fewer weeds, lower ammonia emissions, lower fertiliser costs and boosts the grass yields.

Vredo's powerful injectors

Profi

For self-propelled and trailed tanks with hydraulic valve. Available with single or double V-disc. Available widths: 8.25 metres, 9 metres and 12 metres.

Profi XL

Extra-wide injector with clever folding system. Available with single or double V-disc. Big in precision farming. Maintains the desired capacity with lower application rates and large working widths! Available widths: 15 metres and 18 metres.

Profi Eco

Injector for trailed tanks that offers an excellent price-quality ratio. Available with single or double V-disc. The Profi Eco is always a good match thanks to its low weight, universal coupling options and compact dimensions in transport position. Available widths: 6 metres, 6.75 metres and 7.50 metres.

Familiar with our SSU umbilical unit?

The universal slurry injector connection that makes an umbilical unit from every standard injector! When disconnected, your standard injector can be used again with your tanker or self-propelled unit. Suitable for slurry injectors and arable injectors. Do you have two or more injectors? Then all you need is just a single SSU umbilical to save on costs and maintenance!
